SE Technicians

What we do.

We would like to present some additional work that we do „behind the scenes” that not all of you might be aware of. Increasingly, year to year, clients require not standard solutions. Due to the fact that projects are more demanding, many times we need to properly adjust or modify devices to suit client’s needs.

Why we do that.

Satisfaction of our clients is the key therefore we follow “Yes, we can” attitude whenever and wherever is possible.

Who does do that.

Fantastic team of SE Technicians are behind of all of this. Checking for the possibilities, looking for ways to adjust, finding local suppliers, checking for new solutions, spending hours in warehouse just to be sure that modification works, is safe and is according to the special requirement.

Portable dew point monitor

To be used with: SD, SDD

Portable dew point monitor is made by Shini Europe with high quality components. Packed in the suitcase that prevent it from damages and is easy to carry. To use it is enough to switch the power on, apply hose into the connector in the device and await for the measurement.

Container for material collection from dust separator

Possible for series: SG 16/20N/24N

Container is used to store granulated material and to transport it in very easy way for example to machine. Equipped in pipe for transportation hose connection gives possibilities to use any hopper loader of the clients choice. Made with galvanized steel and powder coated. Container also has wheels for easy movement.

Big bag discharge station

Possible for series: SG 36/43/50/70

Station is used to unload material from big bags. Designed according to dimensions provided by the client to suit exactly to his needs. Made of powder coated, stainless steel profiles.

Stainless steel material hoppers

Possible for many different applications

Hoppers for material made according to client's project (possible in various dimensions and variants).

First type, made of stainless steel, on frame with wheels. Equipped with camlock coupling for transport hoses connection.

Second type, made of stainless steel, without frame and wheels. Transport hose to be connected to pipe on top cover. It is possible to equip pipe with camlock coupling also. ■

Reduction of cutting chamber

Modification made in SG 1621N

Possible in series: SG 16N/20N

Demand was for granulator that can work with small type of injection moulding machine and robot. Standard SG 1621N was too high therefore it was lowered to 95 cm. To avoid any dangerous situations, protective grille was added. ■

Storage box for belt conveyor

Modification made in CML-M3

Possible in inclined belt conveyors

Special storage box was made for the material that goes out of the shredder through belt conveyor to smaller SG for granulation. Box, made of stainless steel with top cover opening for easy access. ■

Service

Possible for all Shini devices

If you have device that need fixing you can send it to us for inspection.

We will check, quote, repair if possible and send back device to appointed address.

This will help to reduce costs of the on-site service along with time needed to get to the client, get the spare parts and make the actual repair. ■
